

## ZANE KANYER PE, SE | ASSOCIATE PRINCIPAL

### Experience

Zane provides structural engineering solutions for public and commercial buildings as well as multi-family structures and single family residences. Since joining Swenson Say Fagét in 2004, he has been involved with seismic evaluations and renovations of existing buildings. He is familiar with the City of Seattle's "Bolts Plus" program that, when put into place, will require 800+ unreinforced masonry (URM) buildings to meet specific seismic tolerances. He understands the structural design needs required to correct the URM deficiencies. Zane became an Associate Principal in 2013 and is a member of the Structural Engineers Association of Washington and the American Institute of Steel Construction.
